

Production Operations Management

April 28 – 30, 2025

Venue: PIM, Lahore.

Rs. 41,000/=

Note: The Fee is Exclusive of GST.

Course Description

Operations management is defined as the design, operation, & improvement of the systems that create and deliver the firm's primary products. Due to globalization, many Pakistani businesses today face competition from professionally run multinational organizations in both local and foreign markets. Local organizations are thus forced to make continuous efforts to improve their productivity and performance in order to produce higher quality products at lower costs. This training presents the various effective tools and techniques that are employed by the high performing organizations throughout the world for producing their products.

WHO MUST ATTEND?

- Production and manufacturing professionals
- Industrial engineering professionals
- Anyone in an organization dealing with production function

LEARNING OUTCOMES

After the workshop, you will be able to:

- To present the various elements that comprise the field of Production Operations Management.
- To introduce key operations management tools and concepts that can be applied to a variety of situations for achieving cost efficiency.
- To introduce emerging concepts in the field of production management

COURSE CONTENTS:

- Production operation management and transformation processes
- Designing an effective and efficient plant layout
- Production planning and master production schedule
- Materials requirements planning
